of a transient nature when it arises from the gonorrhea and is commonly removed by depleting medicines. When it follows hepatitis it arises from the neglect of depletion. But it sometimes occurs in the West Indies from the febrile, but protracted operation of heat, and miasmata without being preceded either by yellow fever or inflammation of the liver. The blood vessels are unable in this case to emit the tones of inflammation but descend directly ~~below disease~~ ^{paving} down to disorder without ^{paving} through the stage of disease.

2 It is sometimes brought on by *Leishmania*.

3 It is a frequent consequence of the

✓ But This pallid countenance does
not take place in this disease from
Other Causes. On the Contrary - the face
generally assumes not a yellow, but
a Sallow or Olive Color. f

Habitual use of Ardent Spirits. Drunkards

After exhibiting red or yellow faces for
a number of years, often become pall.

This is the effect of the total stoppage of the
secretion and excretion of bile. It is gene-
rally a forerunner of death. It marks the

as
the worst grade of intemperance, ~~and~~ white

does the highest grade of heat. ~~It is~~ ^{The liver}

looks and feel like dry flesh. It is in the

same torpid state that we shall say hereafter

the brain is in fatuity. ^{This disorder has} ~~It occupies a greater~~

~~or life portion of the liver, but sometimes~~

~~been called~~ ~~the whole liver it is called~~

generally

1 Hepitalgia. It is attended with some
pain, and when enlarged, with a difficulty
in lying upon the left side. It sometimes

continues for many years, ^{without any pain,} but more
commonly it brings on a fatal ascites,

for the lymphatics being numerous
 in ~~the~~ the liver, the streams of lymph
 which usually ^{flow} thro' it are naturally
 diverted into the Abdomen. Where it
 does not produce ascites, it brings on
 atrophy, and marasmus that is, a
 waste of the body without fever. It
 sometimes ends in a fatal hemorrhage
 known by the name of Melena.

The Remedies for this disorder are
 a large Caustic applied to the external
 region of the liver. ~~It~~ I have once seen
 the liver resuscitated by this remedy &
 an incipient Dropsy of the belly thereby
 cured.

a The Cold Bath. The late Dr Denonmandie
 of Bristol, ^{in this state} opened one he ~~the~~ seen it cured
 by the use of this remedy.

3 Frictions & Stimulating Applications

to the region of the liver.
 4 Calomel in small doses continued for
 months & years. I think I have done
 good by this medicine used in this way
 in Hepatalgia.

5 Chalybeates and bitters and aromatics.
 They act sympathetically upon the
 liver and they impart a vigor to the
 whole system which is felt by the liver.

6 Long journeys persisted in once a
 year for ~~two~~ three or four years, have
 sometimes cured this disease.

7 ~~Intercourse~~ I have once known it
 removed by a change of climate.

I shall dismiss this disorder of
 the liver by remarking that it fre-
 -quently exists in a portion of the

h

t
.

112

liver only, and in these cases is often combined with some one of the diseases of the liver which have been described.

II Jaundice.

The ^{yellowness} ~~symptoms~~ of this disorder are ~~transient~~ ^{transient} and ~~characteristic~~ over the external surface of the body, but most ^{obviously} in the eyes - languor, depression of spirits, costiveness - now and then diarrhoea - white stools, - itching of the skin - a slow fine pulse, but more commonly a natural pulse, with a natural temperature of the skin. Costiveness is said to occur most frequently in young people. It is said to be less common in old people, & very rare in drunkards.

Its Causes are transient & Chronic.

The former are 1 a Spasm upon the
Common duct, 2 bilious & intermitting
fevers. - ~~be said~~ ^{It is said} sometimes ~~observed~~ ^{to prevail}
~~to appear~~ as an epidemic. When it does,
it is as a Symptom only of those Antem-
=nal diseases. 3 Fear 4 Anger 5 prepure

from Contagious parts particularly
from the ^{pancreas, the} ~~from the~~ Colon when distended with
feces, and the Uterus in pregnancy.

The Chronic Causes are 1 viscid
bile, and Gall stones obstructing the
cystic or Common duct. 2 a tumor
or Schirrus in either of those ducts, or
in the pancreas.

3 Dr Grouse mentions a Case of Jaundice
from the Common duct becoming in-
=flamed from Disease.

4 matters in the medium particularly
 congealed with obstructing the passage of
 bile into it. Take notice ^{cases} ~~cases~~ that
 obstruction in the two last ~~cases~~ ^{cases} that
 have been mentioned is only in the com-
-mon duct. Dr. Monro informs us
 that he once saw the cystic duct so
 completely closed by two gall stones
 that no air could pass thro' it, &
 yet the patient died without jaundice.
 Dr. Ke thus far a similar ^{Absence} ~~case~~ of
 jaundice ^{where} ~~from~~ ~~was~~ ~~obstruction~~ of the
 cystic duct was obstructed by a gall
 stone as large as a nutmeg. When
 a jaundice occurs with a complete
 obstruction of this duct, it is surp-
 -posed the obstructing matter com-
 -municates imperceptibly from the

insensible cystic duct, to the exquisitely
 sensible ^{and irritable} termination of the common
 duct in the duodenum which is thereby
 contracted, and thus hepatic bile is
 retained, and afterwards absorbed, or
 conveyed by resorption into the blood.
 There is in this ~~case~~ case an error
 of sensus and motus.

5 Dr. Stoll has given us an account of
 three cases of fatal jaundice in which
 no obstruction of any kind was disco-
 -vered either in the cystic, or common
 duct. The obstruction was probably
 from a tonic spasm upon the
 common duct which relaxed after
 death.

~~When obstructions are seated in the
 cystic duct only, the progress of~~

[Faint, illegible handwriting covering the page]

4 ~~The body goes on as usual~~

There have been many disputes
whether bile can exist in the blood.
Dr Reebuck a graduate in this Univer-
-sity has clearly proved that it does,
in this disorder, by a number of
satisfactory experiments. There have
likewise been disputes among patho-
-logists whether the bile be converted
into the blood in a jaundice by ab-
-sorption or regurgitation. It is
most probable it enters the blood in
both ways. The black jaundice seems
to be produced by the absorption of
~~the undigested~~ black bile from the
gall bladder. Dr Smith supposes the
blackness of the Africans to be
derived originally from this cause.

I have seen the color of the face of
a greenish cast in several instances
of jaundice. I have ^{no} doubt of its being
derived from the absorption of green
bile, ~~from the gall bladder~~.

Persons of all ages are subject to
the jaundice. It occurs in men & women
infants. It attacks the two sexes nearly
alike. Of 100 patients whom Dr Mc-
=Gordon attended in a given time in
this disorder 52 were men & 48 wo-
=men.

Objects are seldom coloured in the
eye by this disorder, owing to the bile
tinging the tunica ~~ad~~ conjunctiva
only, and not the humors of the eye,
nor is the color of the ^{brain,} tongue, nor
the ~~taste~~ of the saliva - nor the quality
of the milk generally affected by the
bile

which circulates with the blood.
milk and oysters have their natural
taste, but there are certain aliments
and drinks which impart a sensati-
on of bitter to the tongue.

There is something ~~extraordinary~~
peculiar in the action of the bile
upon different parts of the body.
while several of the fluids, and
some of the solid parts of the body
receive ~~no~~ color from it, cer-
-tains and bones are sometimes
tinged by it. Of this Dr. Stoll mentions
an instance which came under his
own observation.

The Remedies for Jaundice should
be regulated by its symptoms & causes.
If the pulse be full or tense, it
will be proper to begin the cure by

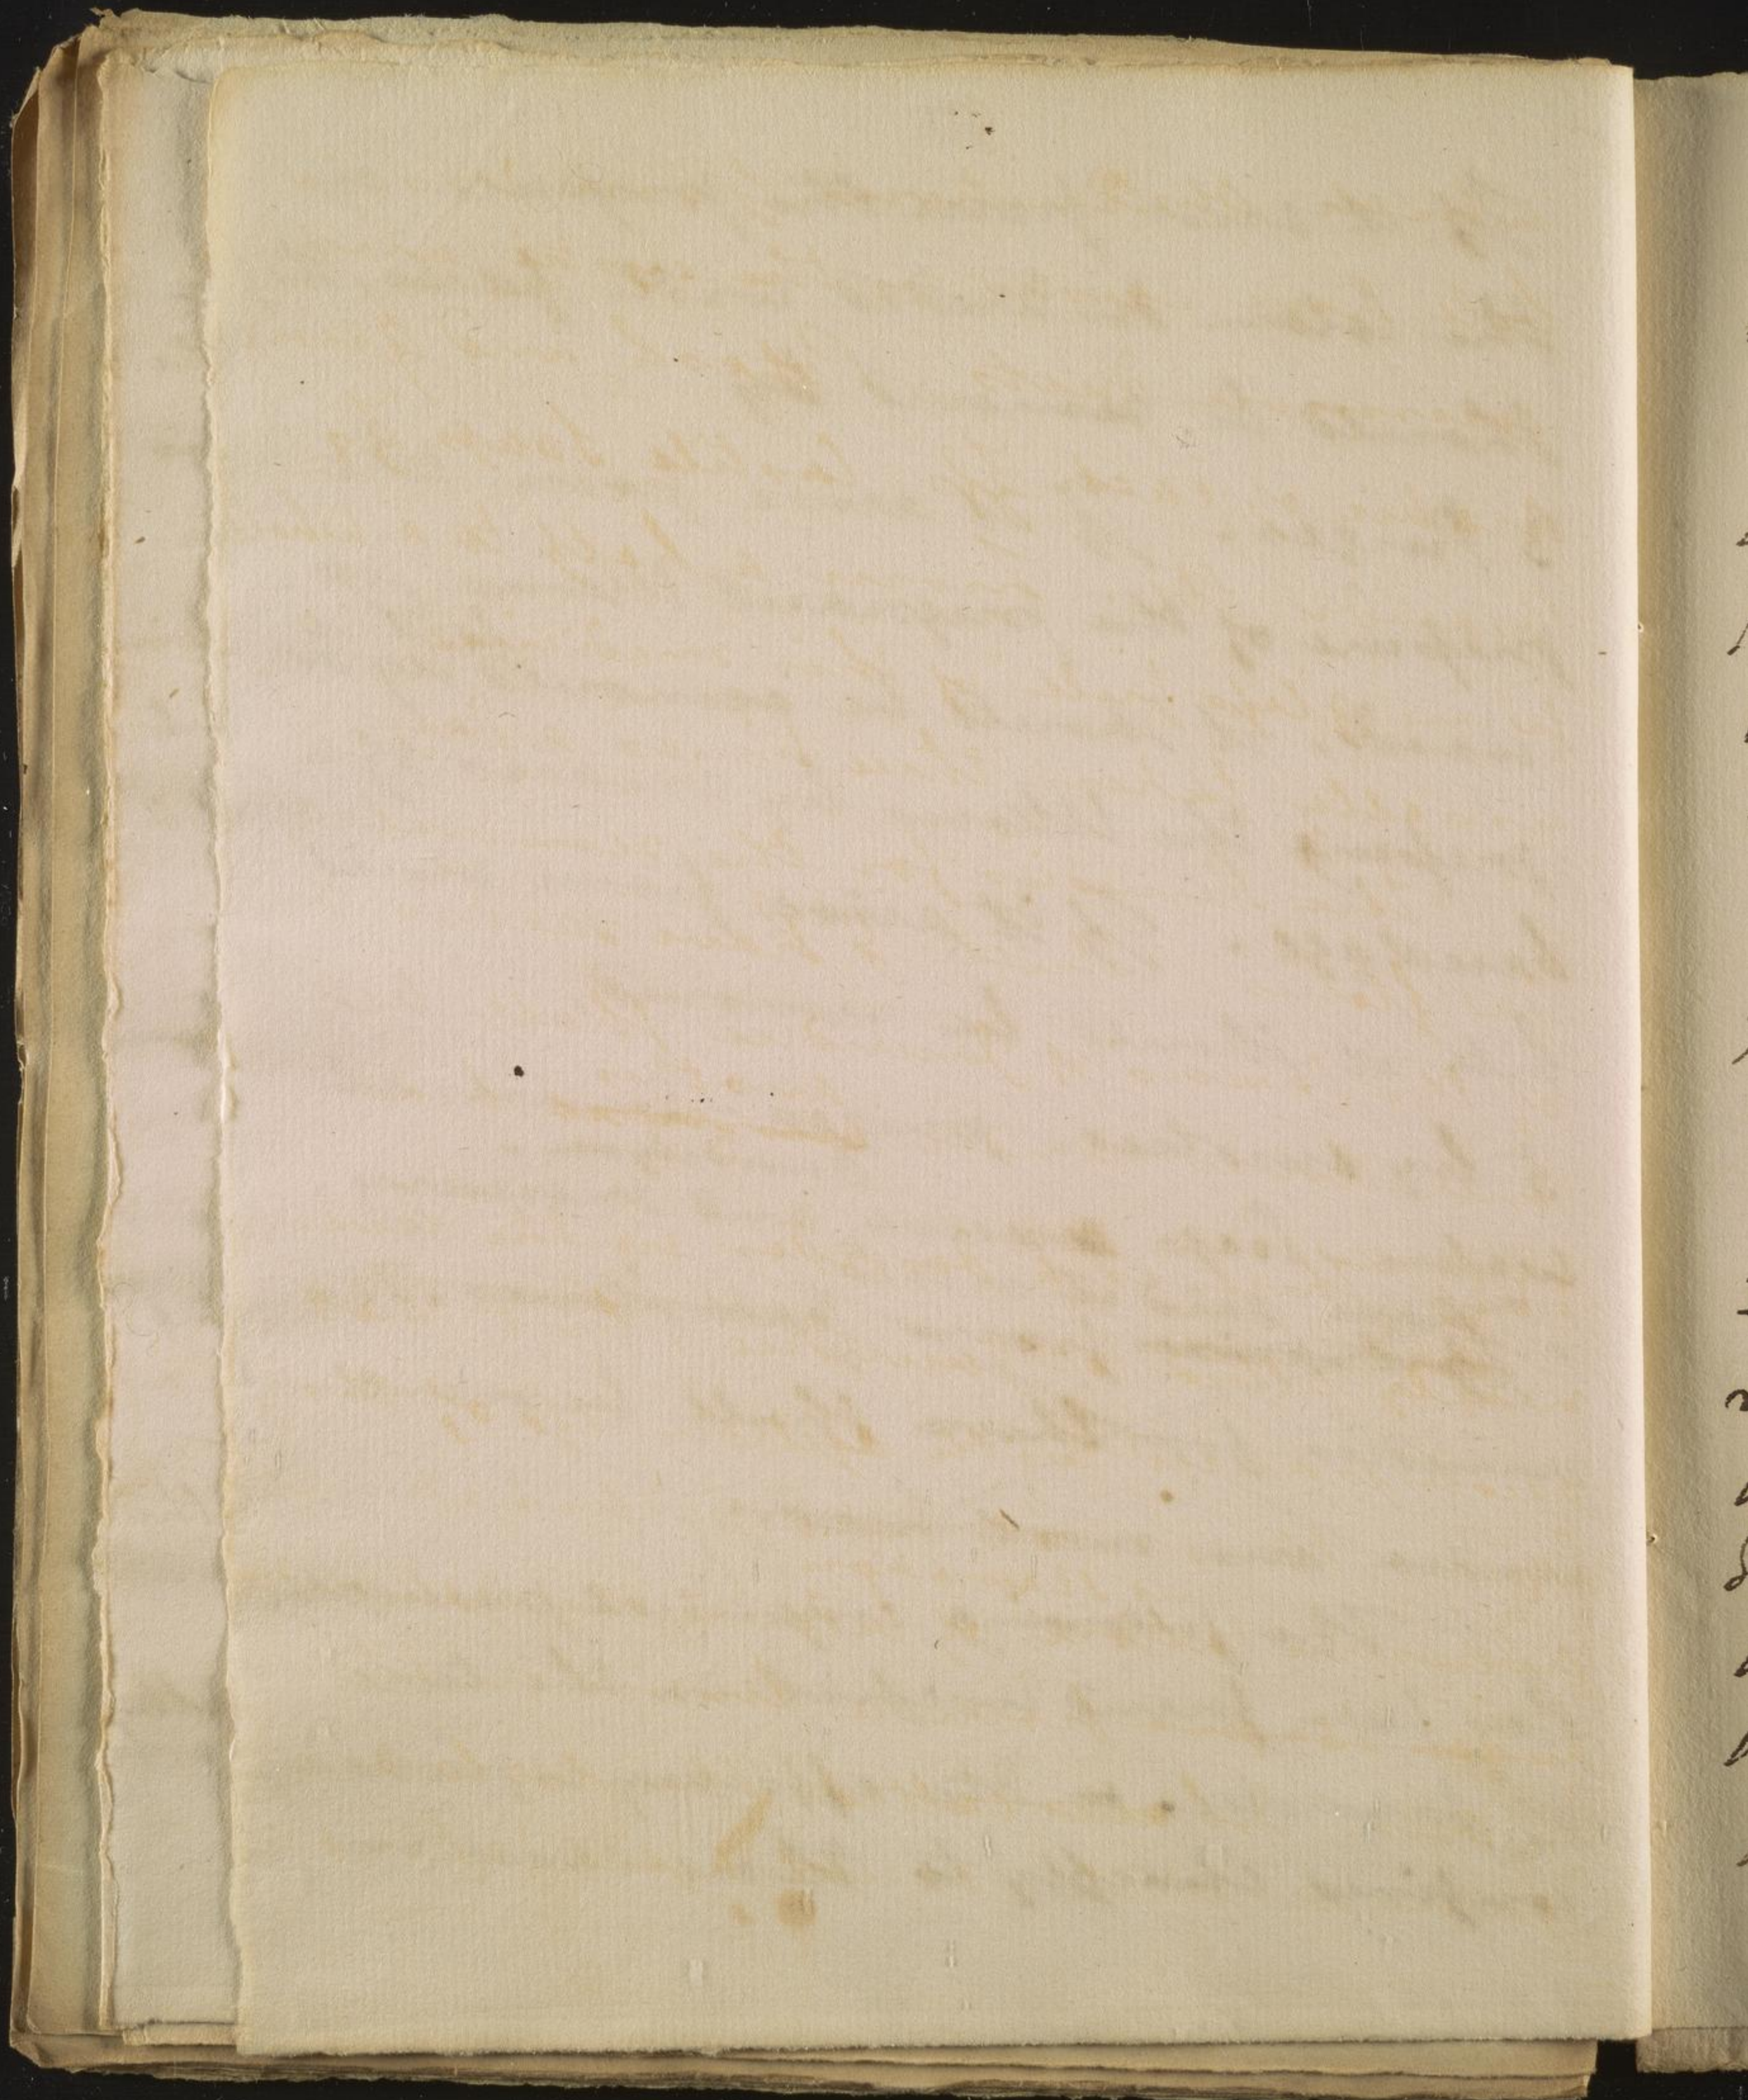

[Faint, illegible handwriting in cursive script, likely bleed-through from the reverse side of the page.]

1 Bloodletting. The disorder in this
 state of the pulse is always accompa-
 -nied with more or less disease in the
 liver. I have occasionally bled in this
 state combination of disorder with dis-
 -ease with success once in 1803, and again
 in 1804 in the Penney's hospital, but
 I have as often ~~been~~ employed this
 remedy without effect. Authors gene-
 -rally consider ^{fever with} jaundice with fever
 as a most alarming symptom.
 It is to probably chiefly from the
 neglect of early and sufficient bleeding.
 If the jaundice arise from a
 spasm upon the common duct, the
 remedies should be
 2 opiates, laxatives, the warm bath,
 and afterwards tonics.

The first thing I noticed
 when I stepped out of the
 train was the fresh air.
 It felt like a new world.
 The people here were
 different from the ones
 I had known before.
 They were friendly and
 welcoming. I felt like
 I had found a new home.
 The food was delicious
 and the people were
 kind. I was in luck.
 I had found a new
 place to call home.
 The people here were
 different from the ones
 I had known before.
 They were friendly and
 welcoming. I felt like
 I had found a new home.
 The food was delicious
 and the people were
 kind. I was in luck.
 I had found a new
 place to call home.

If it arise from the pressure of
 the Colon distended with feces, they
 should be removed by
 3 Purges. If it arise from the
 pressure of the pregnant Uterus ^{up-}
^{ward,} it should be removed ^{by de-}
^{pressing} the Uterus by means of a
 bandage. If it arise from viscid
 bile it should be removed,
 & by emetics. - purges - mineral
 waters - Soap, exercise, and mercury.
~~I have said it arises~~
~~from Gall stones. The~~
~~remedies for them shall be mentioned~~
~~under our next head.~~

The following empirical prescription
 has been found useful in the cure
 of Jaundice, & its efficacy is probably
 confined chiefly to those cases in

which Obstructions from viscid
bile have existed in the cystic and
common ducts. Potash and Gum
Arabic of each ℥ss Castile Soap ℥i
Brandy ℥i. Truen a half to a whole
wine glass full of this medicine is
usually taken three times a day.

The Remedies for the removal of
Gallstones, which I have said is one
of the Causes of Jaundice shall be
mentioned under ^{another} ~~various~~ head.

III. There is a disorder in the liver
nearly allied to Jaundice, but not
accompanied with yellowness of the
skin. It consists in a preternatural
accumulation ^{and stagnation} of bile in the Gallbladder,
~~and a stagnation~~ from a torpor in its
fibres. ~~I have called~~ The stools are
generally white, except after taking a
purgel

[Faint, illegible handwriting in cursive script, likely bleed-through from the reverse side of the page.]

27 when they are of a dark color. I have called it Costiveness of the liver. Its remedies are active purges, mercury and exercise.

IV. Gall Stones come next in order under our notice. They are formed from the bile, and differ from each other in the following particulars.

1 In size, being ^{about as large as} ~~as large as~~ a small pea, up to a small egg.

2 In figure being rough, angular, or highly polished from their friction upon each other.

Dr Physick has in possession two or three stones of the latter kind taken from the gall bladder of Mrs Muller the gentleman ~~case~~ case was mentioned in speaking of the secretion of water by the liver.

3 In number being from one to 114. That immense number of Gall Stones Dr

[Faint, illegible handwriting in cursive script, likely bleed-through from the reverse side of the page.]

Shattuck tells us were found in the Gall-
 bladder of a person dissected by Dr Prescott
 of Groton in Massachusetts.

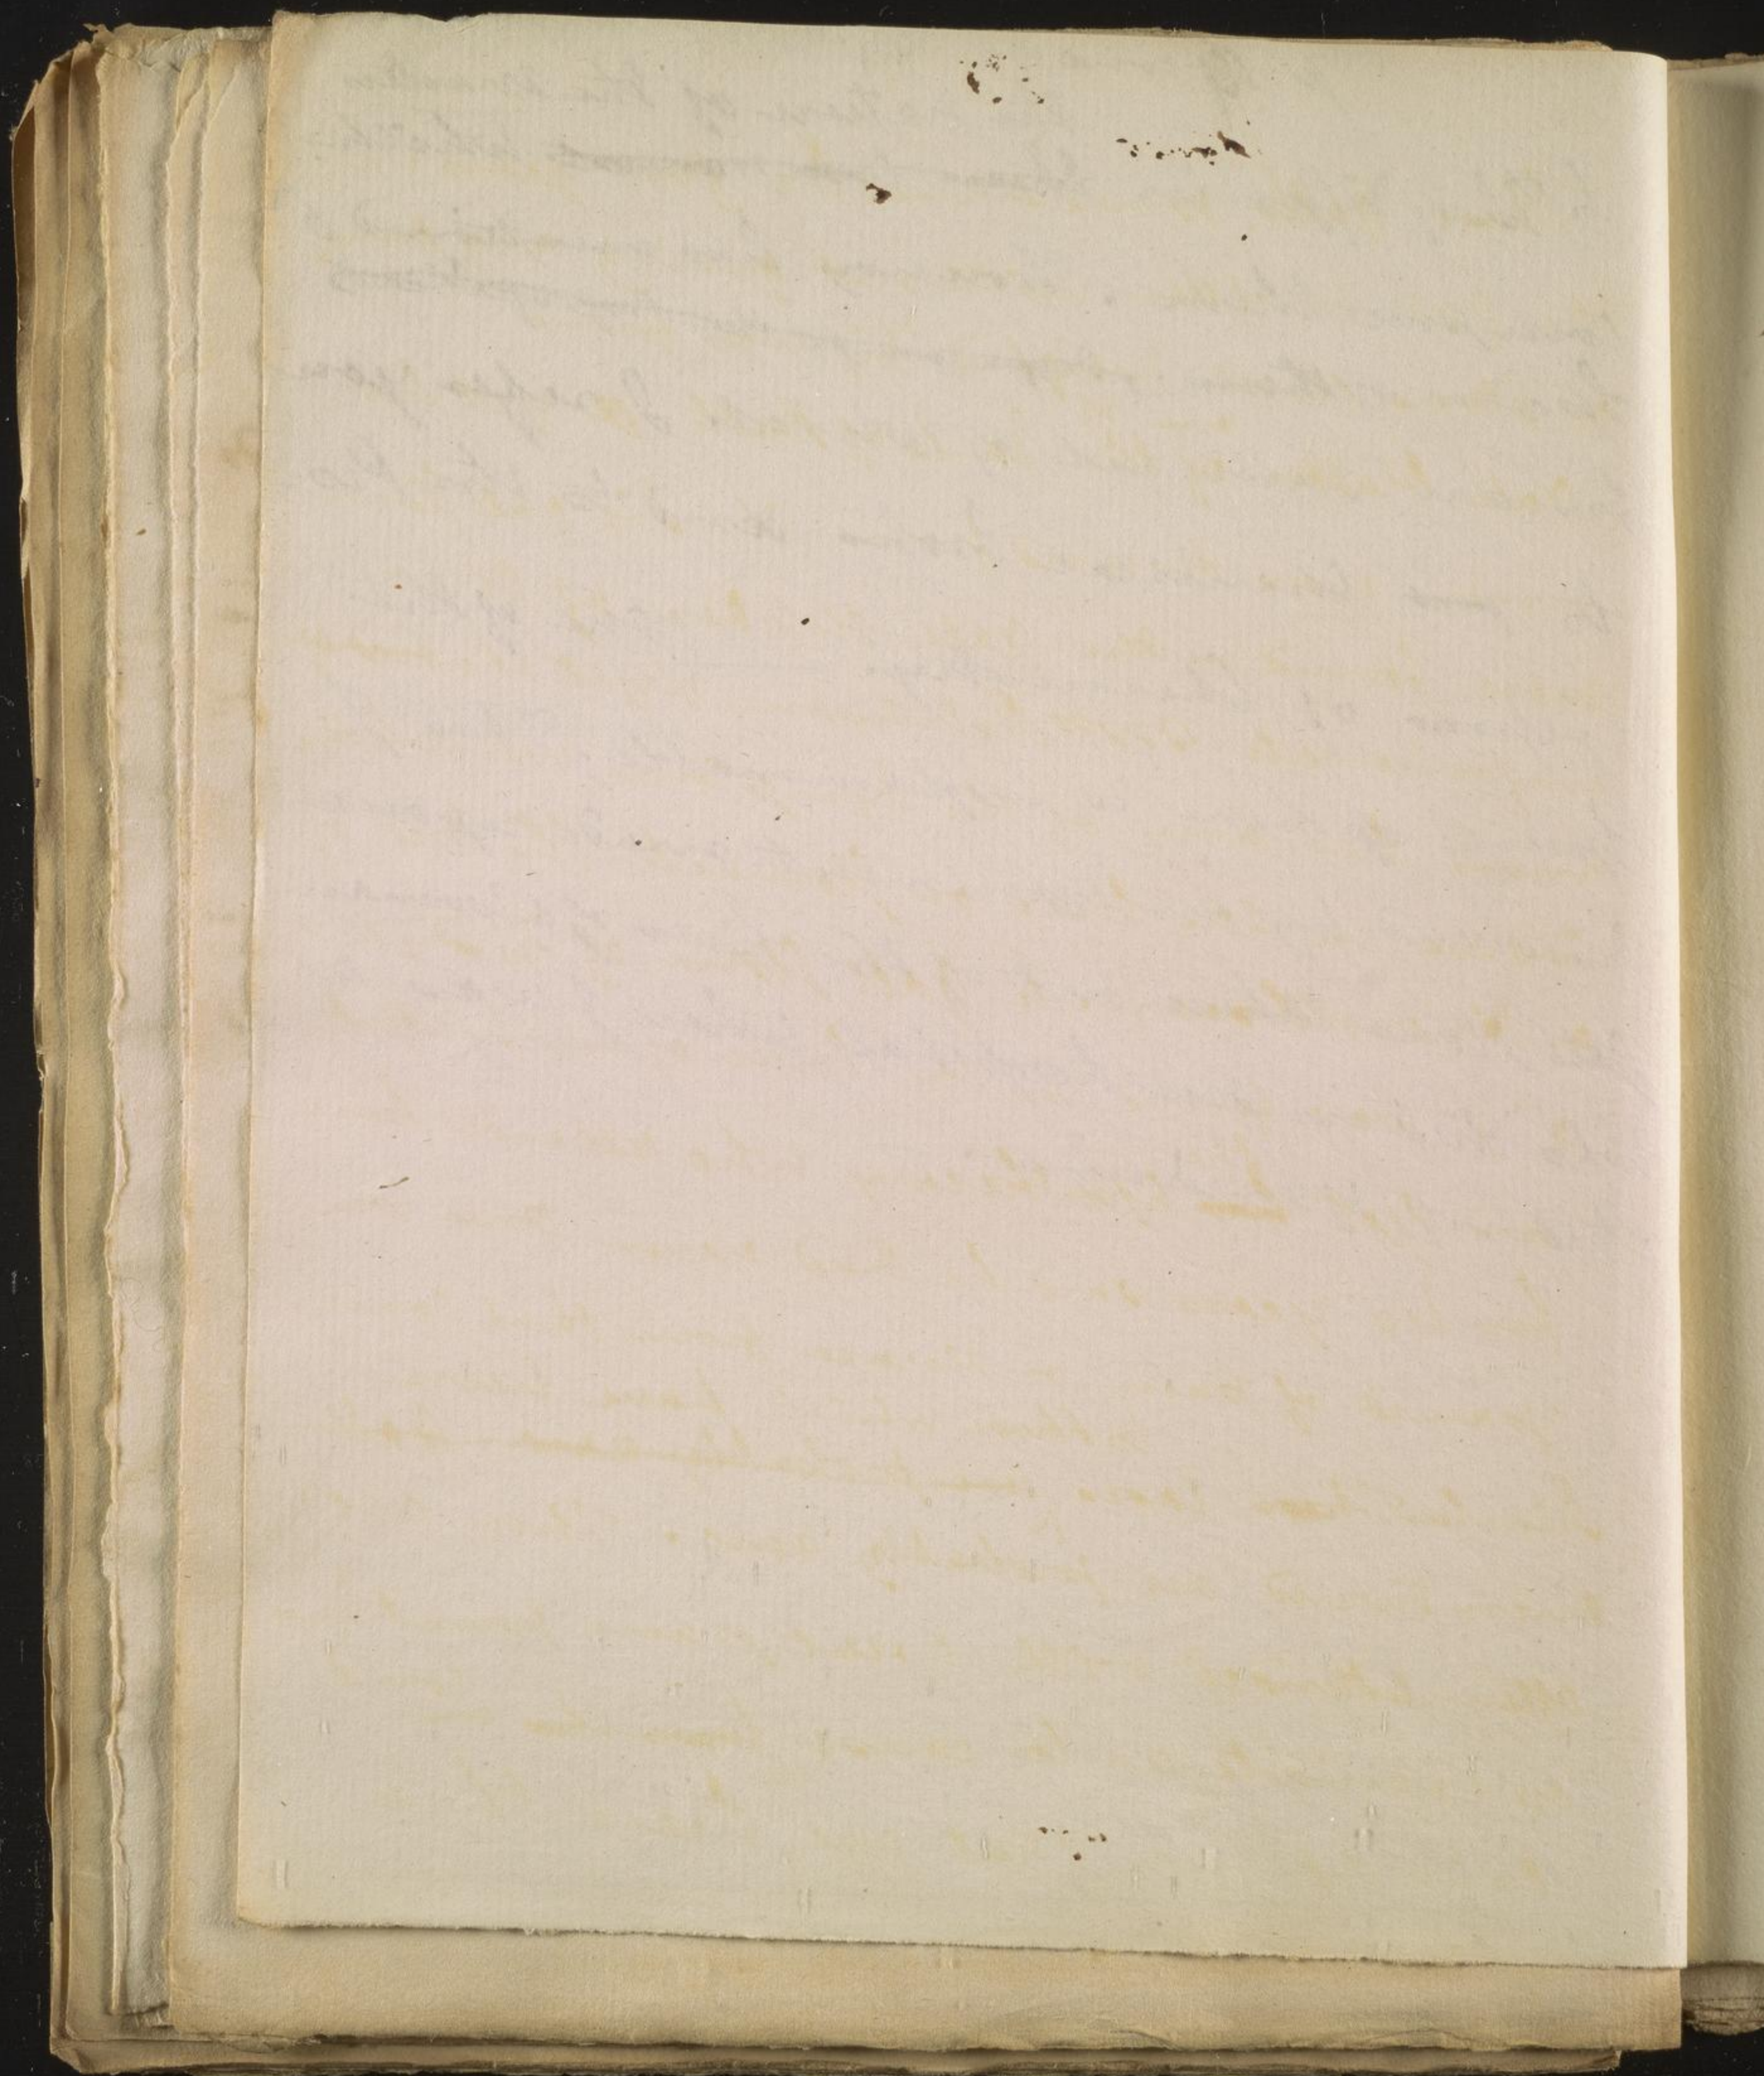

4 In Wright - from five grains to 31 3/4 grs
 and three grains. A Gall Stone of the latter
 Wright is mentioned by Dr Lettsom in the
 first volume of the Memoirs of the Me-
 dical Society of London.

5 In Consistence. They are of the Consistence
 of tallow, and sometimes nearly as solid
 as stone.

p: 16 contd. 84

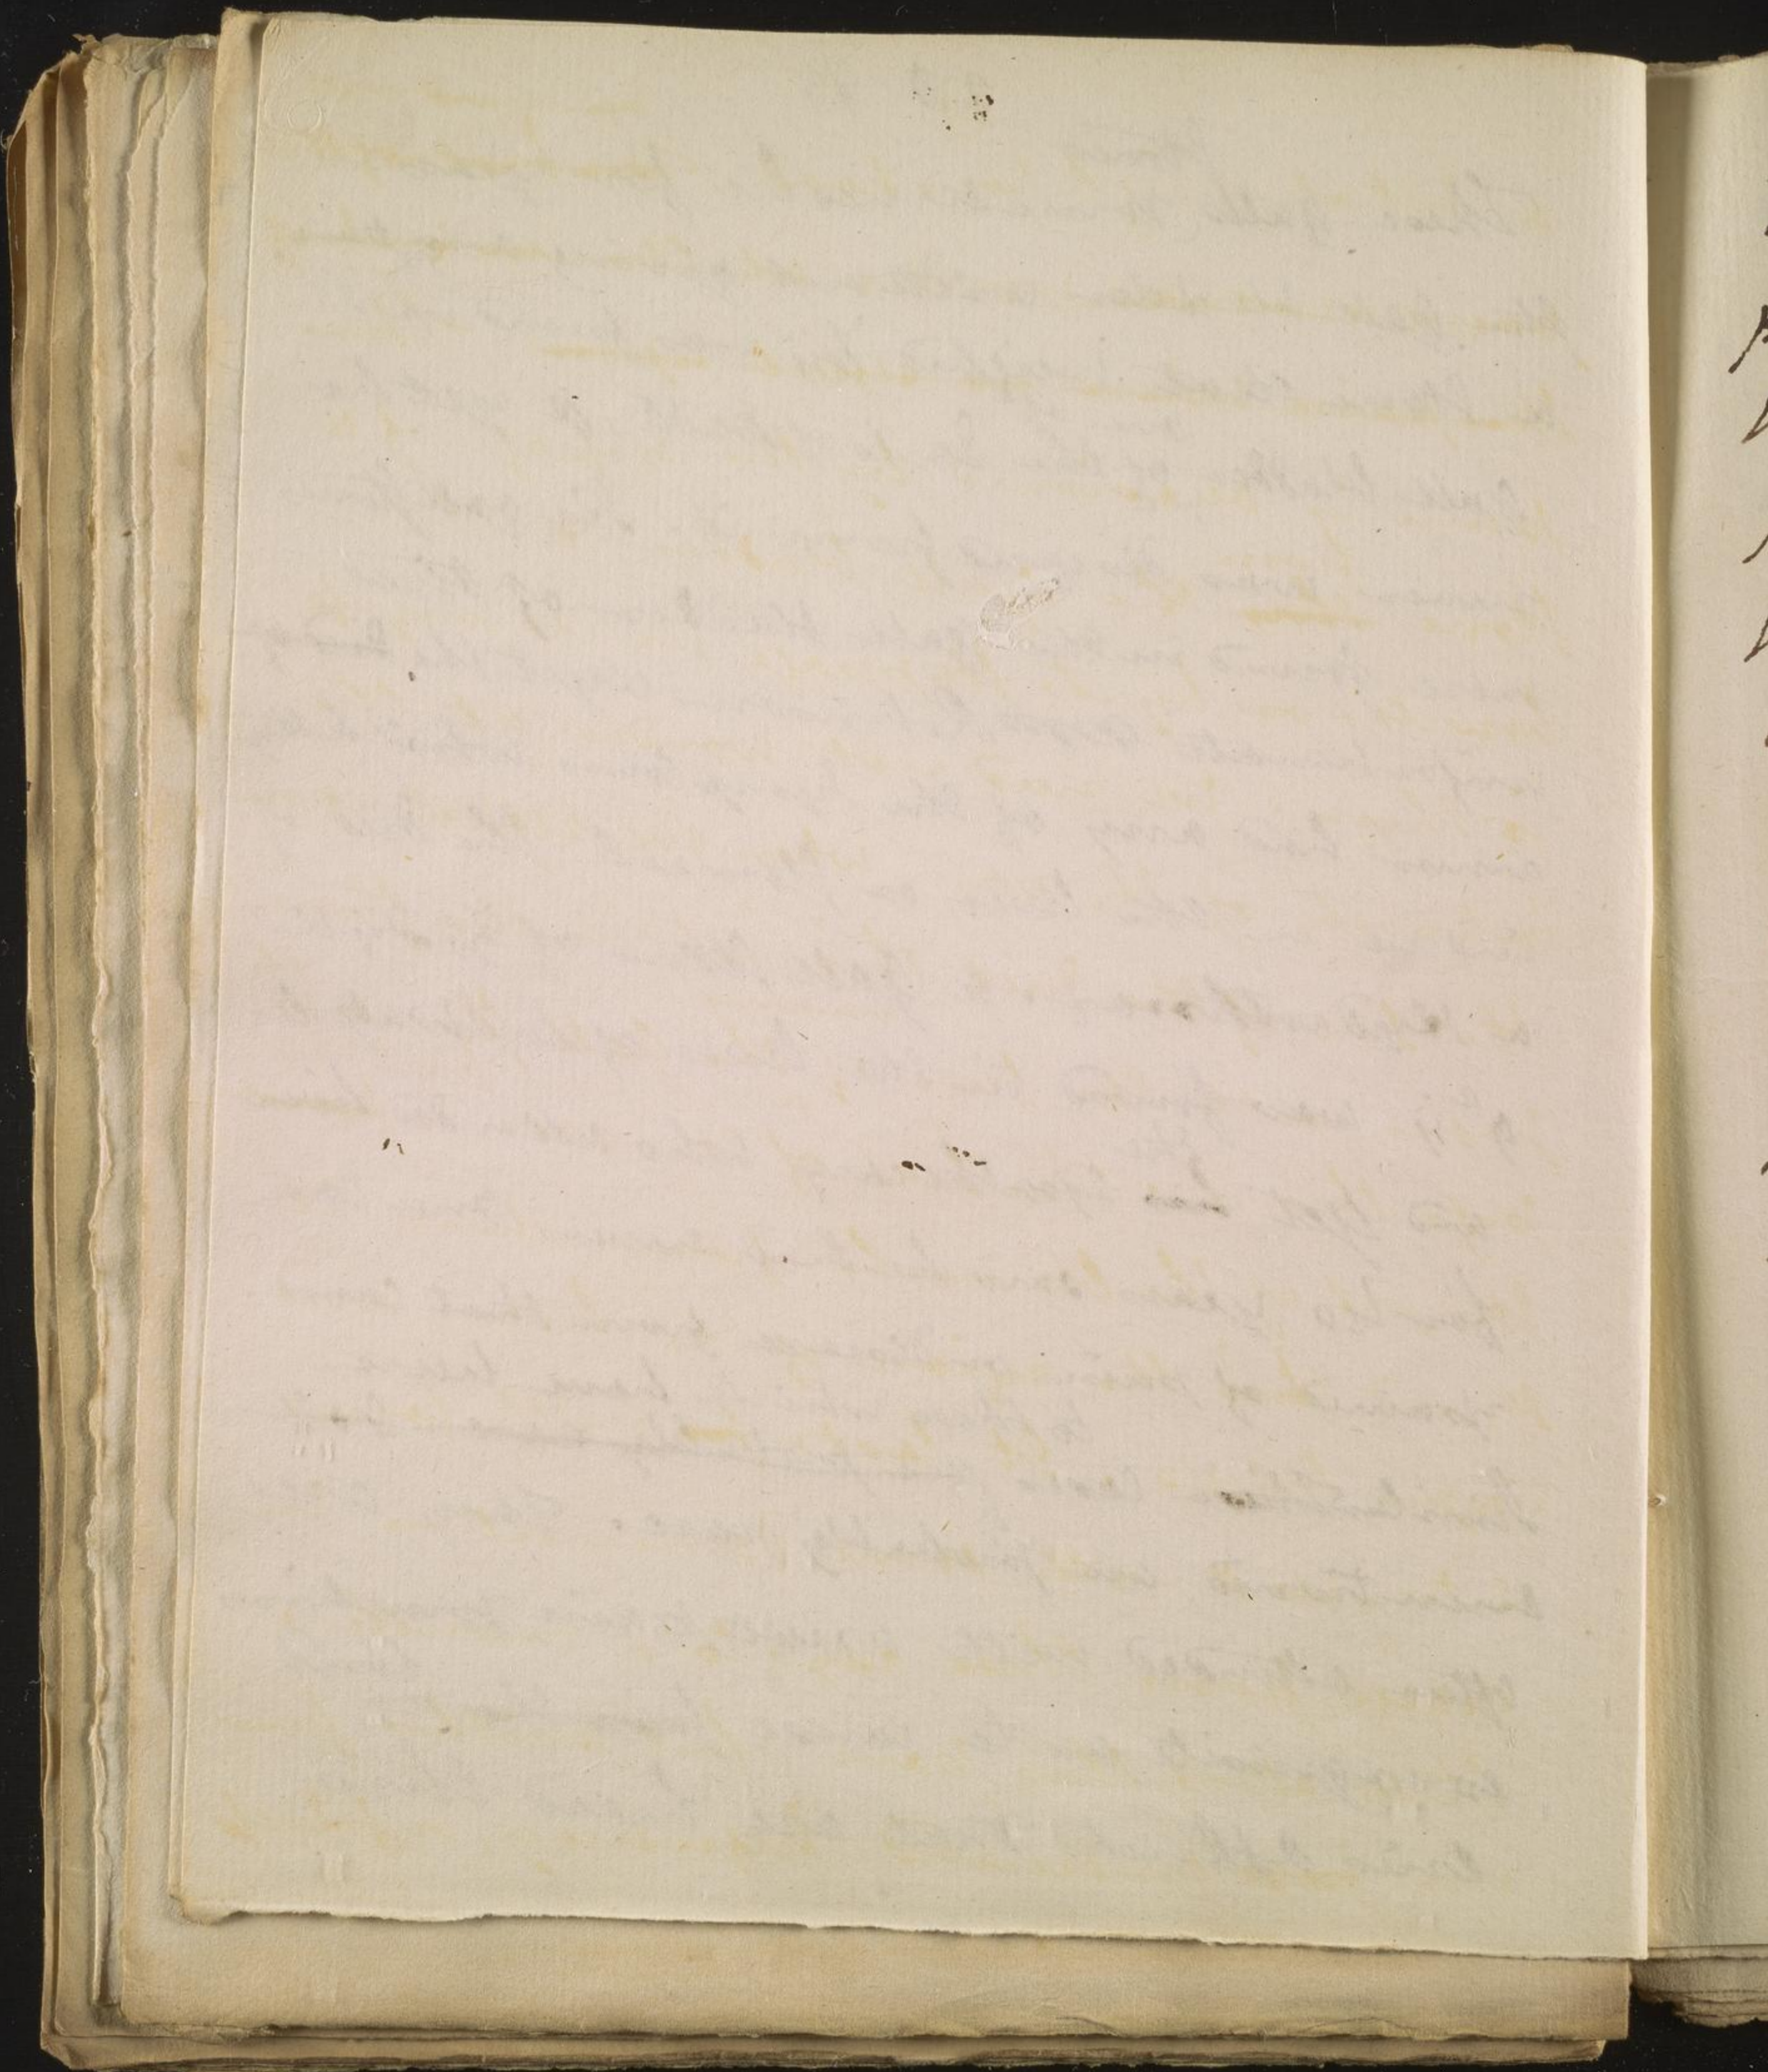

8 . 6 They differ in ~~their composition~~ the nature of the matters which compose them. Fourcroy has mentioned 6 species of them, ~~and also the properties of them~~ for an account of which I refer you to ~~your~~ chemical books and to the Principles of Chemistry. — one of the

species of them is inflammable. } This I discovered by an experiment made upon Gall Stone taken out of the liver of a woman who died in our hospital when I was a student of medicine. —

28 85

These Gall^{stones} sometimes lie for years in
the Gall bladder without giving any pain.
a Stone that weighed 7ij was found in the
Gall bladder ^{one of} of the Earls of Bath, & yet he
never was diseased from it. Six Gallstones
were found in the Gall bladder of the
unfortunate Mrs Robinson. Yet she died of
indure in the liver or stomach. She died of
a Hydrothorax. a Gall Stone of 7i 2ij &
9th was found in the liver of Lord Walpole,
and yet ~~his~~ ^{the} Apothecary who attended him
for 40 years said he had never once com-
plained of pain or disease from that Cause.
Similar ~~these~~ Cases ^{to those which have been} are ~~probably rare~~. Gall
even though are probably rare. They are
often attended with great pain sometimes
so exquisite as to cause ~~from the~~ ^{loud}
cries & shrieks that are heard thro

at 86 ~~we need not~~
a whole neighborhood. ~~the seat of the~~
~~pain is occasioned~~ wonder at the intensity of
~~this pain when we reflect upon~~ This
pain is occasioned by the passage of a
stone ~~from~~ the gall bladder to the
bowels, or by its stoppage in its progress
to them. We need not wonder at the
intensity of the pain when we reflect upon
the size of the duct thro' which the stone
passes with the size of ^{many} the gall stones ^{ch.} w:
pass thro' it. The seat of the pain is ^{first} in
the pit of the stomach, from whence it
spreads thro' the region of the liver, and
upper bowels. It lasts ~~for~~ with some
intervals & with some diminution in
degree from three days to a month.
Chills attend this pain, but neither fever
nor ~~fast~~ increased frequency, or pulsation

V ¹ Such as are proper in ^{the} forming
state of the disease induced by them.

+ ~~to~~ ^I ¹² ~~the~~ The symptoms of an
approaching attack of this disease are light
pain - tenderness - flatulency - and yellow
- turbid water. In this state of ^{the} disease
small & repeated doses of Laudanum - Ab-
-sorbent - ^{a gentle purge} ~~not~~ the pedicularium, & rest pre-
-vent the formation of a periton.

or tension of the pulse. A yellowness of the skin generally attends each paroxysm of the disease. In some persons a yellowness of the face is a constant symptom of the presence of ~~Gall~~ stones in the Gall bladder. — It is from the supposed absence of muscular fibres in the Cystic duct, and the small depth of sensibility exposed both by ~~the~~ it, and the Ductus Communis, the pain is said ~~never~~ ^{to} depend upon the stone pressing ^{upon} and ~~pressing~~ distending the Duodenum at the place where it is connected with the Common duct.

The Remedies ~~for~~ for Gallstones divide them into ~~three~~ ^{two} Classes 1st such as are proper to relieve a paroxysm of the disease ^{induced by them} & 2nd such as are proper to remove ^{as} ~~its~~ ^{them} cause. +
 1st The Remedies for a paroxysm of the

[Faint, illegible handwriting on aged paper, likely bleed-through from the reverse side. The text is arranged in approximately 15 horizontal lines.]

[Faint handwriting on the edge of the adjacent page.]

V The late Dr Zimmerman thought highly of this simple medicine. It was one of his prescriptions for Frederick the 1st King of Prussia for a dropsy but on by an obstructed liver. He prescribed the extract of this ~~medicine~~ plant as well as its juice, and that to the amount he tells us of one hundred pounds a year.

It is probable all the medicines that have been mentioned act differently according to the nature, or component parts of the gall stones. —

the Taraxicum of Linnaeus. There
 are respectable vouchers for the efficacy
 of all the remedies I have mentioned.
 In favor of the Dandelion, I can speak
 from my own experience. I was led to
 use it with the more confidence from having
 read in Cheselden's Anatomy that Oxen
 when killed in the Winter discover biliary
 concretions in the liver, but never after
 they have fed for two or three months
 upon the Spring Grass. ^{I have heard this}
^{fact confirmed by a butcher in this city.}
 What manner, ^{all} these remedies act I
 know not - It is certain ^{some of them partially} they dissolve
 the Gall Stones out of the ^{body}, but
 it is difficult to conceive how they can
 be conveyed in a state so concentrated, or
 in such a quantity ^{as to act upon the Gall}.
~~as so diluted~~ Stones in the Gall bladder. ^{Zimmerman's}
^{practic. Med.}

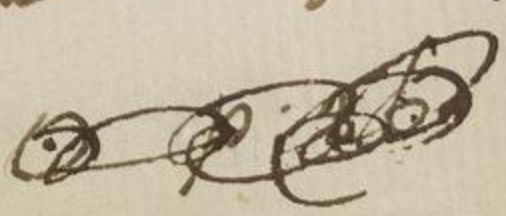

V Dr Darwin & Dr Jacob Wall have published
each a Cure performed by this remedy. -

The remedies which act mechanically
in removing Gall Stones are

- 1 ~~Heavy~~ Emetics frequently repeated
- 2 Active purges. 3 copious ^{draughts} ~~drinks~~ of warm water.
- 3 Electricity. 4 Exercise especially on horseback. 5 a temperate Diet consisting chiefly of vegetables. 6 The Alterative use of Calomel. With this remedy given in such doses as not to affect the mouth,

I am sure I have done service.

If a Salivation should be resorted to, when the Calomel does not succeed in Alterative doses. Dr Gibbons tells us in the Annals of medicine, that he ~~has~~ removed Gall Stones from 12 persons out of 13 by this remedy. —

Costiveness should be carefully prevented by lenient purges. 

V. The ^{next} ~~last~~ disorder of the liver that I ~~shall~~ was mentioned is Scurphula.

It may be known by occurring in scholastic habits. The remedies for it are the same as for that disorder in other parts of the body, all of which ~~shall~~ ^{will} be enumerated in their proper place. I have once seen the whole liver affected with it, ~~that~~ ^{glandular} whose whole system was more or less affected with the same disorder.

VI. The Scurphus is sometimes the effect of previous inflammation, but it is often the product of impressions too feeble to manifest themselves in disease or pain. ~~It~~ ^{considered as the} While Hepitalgia may be ~~considered as the~~ ^{considered as the} sleep of the liver, this may be considered as ~~its~~ death. It is rarely recapitulated.

Your

[Faint, illegible handwriting, likely bleed-through from the reverse side of the page.]

will not be surprised at this when
 you recollect how little medicine has
 ever been able to accomplish in
 Schistosomiasis even where we are able to ap-
 -ply our remedies in contact with them.
 - The knife is generally the only cure
 for them.

VII. Worms ^{are} sometimes ^{found in} ~~producing~~ ^{are both} the
 liver in which they ~~produce~~ ^{are both} the
 cause & effect of disease, and disorder.
 Dr. Prout says he has often found worms
 in the livers of persons who have died
 of the hepatic state of fever. There is a
 remarkable case of disorder & death
 induced by a large worm in the liver
 of a Mrs. Holt of this city related by
 Dr. Thomas Bond in one of the Volumes

[Faint, illegible handwriting in cursive script, likely bleed-through from the reverse side of the page.]

93
of the London Medical inquiries and
Observations. In the month of Aug^r 1811
I lost a patient ~~is~~ with symptoms
of Jaundice & Hepatitis. The morning
After her death, a large number of
small worms were seen creeping out
of her mouth. They probably came
from her liver where they probably
were the cause, or effect of her disease.
It is ~~the liver exhibits~~ difficult to
detect the presence of small worms in
the liver. The presence of the large in-
-gle worms found in the liver of Mrs.
Holt was known by what she used to
call a "quivering sensation". It is possible
large doses of Calomel might dislodge
them, but I can say nothing in its favor
from my own experience. —

[Faint, illegible handwriting in cursive script, likely bleed-through from the reverse side of the page.]

[Faint, illegible handwriting on the adjacent page, visible through the binding.]

Dissections exhibit the following appearances:
 - as After death from the diseases & disorders
 of the liver.

After acute & Chronic inflammation, the
 usual marks of inflamⁿ - Adhesion of the
 liver to the diaphragm, and of the diaphragm
 to the lungs - a large Abscess filled with
 pus & sometimes with bile & blood - and
 a communication between this Abscess
 and the parts into which it usually
 discharges itself which have been men-
 tioned - great congestion of blood in the
 liver - great enlargement of the liver
 from blood or water - with & without hyda-
 tids, a rigid state of the liver induced by Hypoalgia,
 - chronic partial & general, in the
 latter case the liver enlarged in one in-
 stance as to weigh 27 pounds, - a diminished
 size of the liver - I have seen an instance
 of this in our hospital. There was a

✓ called by Mr. Hunter interstitial Abs.
= Descriptive. — The liver in this case re-
sembles an ~~empty~~ honey comb.

95
mark of a former Abscess upon it - an
Absorption of the substance of the liver &
Tubercles - and Scrophulous tumors upon
the liver - the coats of the gall bladder
thickened and bony - a dilatation of the
hepatic cystic and numerous ducts to an
inch in diameter - gall stones of all the
shapes, and in all the numbers that have
been mentioned - gangrene. I have not
that is but
with one case in books of medicine. Dr
Baillie says he never saw an instance
of it. Perhaps a congestion of blood was
mistaken for it.

I have thus gentlemen from a
large mass of empirical rubbish and from
my own observations delivered to you an
epitome of all the diseases & disorders of the
liver; but you must not expect to find
them in the separate and distinct states in

4

wh

-cr

which I have described them. In no disease do diseases and disorders anastomose (if I may be allowed the expression) more than in the liver. They are blended, they succeed each other, they alternate with each other - and they mutually produce each other. Watch these changes narrowly. Forget the hepatic nosology - attend to symptoms particularly to the pulse. - attend to the Abdomen of ~~all~~ its ~~essential~~ ~~main~~ symptoms - that is to its Dumb form - and preside for the state of the System should it vary a dozen times a day. -

I shall dismiss the subject of the diseases and disorders of the liver, by ^{repeating} ~~repeating~~ a remark of the illustrious Dr Boerhaave, and that is that the liver is ~~disordered~~ ^{out of}

V ~~I suggest it to be directed~~ ^{at} ~~undirected~~
~~in a more spirit measure in~~ ^{at} ~~the~~
~~and~~ ~~be~~ ~~complaints~~ ~~from~~ ~~whence~~ ^{attempts}
he secretly smiled at our abortive efforts
to cure the diseases induced by it in the
~~stomach, bowels other parts of the body~~
~~particularly~~ in the head, the stomach,
the bowels, the kidneys, the muscles &
the skin by directing our remedies
wholly to those parts of the body.

97.
health or ~~the~~ Order in 99 out of an 100 of
all Chronic Diseases. Of how much im-
-portance ^{then} must be it ~~then~~ ^{be} to study its
~~functions and Derangements~~ ^{they appear} whether in disease
or disorder. ~~This is the more necessary~~
its Diseases and Disorders are ^{not only} numerous, and
diffused thro'out the whole system, but often
because they are often ^{devoid of obvious char-}
-acteristic symptoms. ^{This is so much the case that}
be considered as ^{prominently,} the masked battery of death,
the books ~~not to~~ that are worth reading
upon its Diseases and Disorders ^{of the liver} are Saunders
and Lake Leake both of which are in our
Hospital library.
